

ABSTRACT OF THE DISCLOSURE

Disclosed is a system for interconnecting two or more buildings, objects or areas by way of a series of nonpermanent structures. The nonpermanent structures preferably take the form of covered walkway units. By utilizing the system of the present invention, buildings, such as school classrooms, can be joined by covered pathways to thereby provide shelter for people traveling between buildings. The walkway units of the present invention are both portable and modular. These features allow the units to be easily transported and interconnected to form pathways of varying lengths and directions.
